Biology Exhibit Hall Worksheet

Enter the Life's Innovations exhibit.

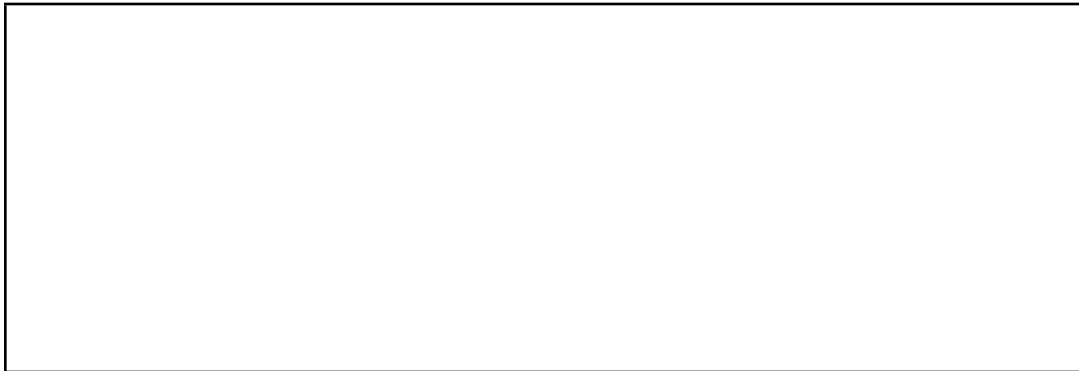

1. Describe how the fish interact with the coral. Do some fish depend on the coral more than others? Explain using observational evidence.

2. Read about the importance of a backbone in fish, then apply the information to explain how a backbone helps humans function.

3. Create a prediction for why humans should protect endangered species.

4. Sketch the snake's tongue below:

5. Explain how the snake's tongue allows it to easily live in the wild.

6. Find the tarantula. How do you think the hairs on its legs help it survive?

7. Observe the rats. What evidence shows that rats are social animals?
