Biology Exhibit Hall Worksheet

Enter the Life's Innovations exhibit.

1. Observe the fish and focus on how they interact with the coral. Based on your observations, describe how the fish and coral depends on each other to survive

2. Create a reason for why humans should protect endangered species.

3. Find the scorpion and turn on the UV light. Create a prediction for why scorpions glow under UV light.

4. The snake's pattern helps it blend in with its surrounding environment to avoid predators. Describe the characteristics of a snake that you might find living in the rainforest.
